

Naviscan Presents IEEE Paper Related to PET-Guided Breast Biopsy

Dresden, Germany - October 22, 2008 - Naviscan Inc., a company specializing in organ-specific high-resolution PET scanners whose breast application is Positron Emission Mammography (PEM), announced today at the IEEE Nuclear Science Symposium and Medical Imaging Conference new research data on its Stereo Navigator™ breast biopsy accessory. The Stereo Navigator™ biopsy accessory is currently an investigational device not available for sale pending FDA 510(k) clearance.

The abstract entitled: "Real-Time Viewer for Positron Emission Mammography Image Guided Intervention" details development of a supplementary tool for physicians to visualize possible lesion movement with nearly real-time feedback. The paper presenter is Christopher Matthews, PhD, Naviscan VP of Technology. Co-Authors Xiaohong Lu, MS, Edward Anashkin, PhD and Weidong Luo, PhD.

An additional abstract featuring clinical research data on the biopsy accessory entitled "Positron Emission Mammography Guided Breast Biopsy" will be presented at the 94th Annual Meeting of the Radiological Society of North America (RSNA) on Monday, December 1, 2008 at 3:40 PM in the Arie Crown Theater at Chicago's McCormick Place.

About Naviscan, Inc.

Naviscan Inc., founded in 1995, develops and markets compact, high-resolution PET scanners intended to provide organ-specific molecular imaging, guide radiological and surgical procedures and advance new clinical therapies. The Naviscan PET scanner is currently installed and available in breast and imaging centers throughout the U.S. as well as utilized in clinical research studies, funded in part by the National Institutes of Health. The Company is headquartered in San Diego, California and is the first company to obtain FDA clearance of a high-resolution PET scanner designed to image small body parts.
